

Screen: The entry point of Math app. Features logo, tagline 'Math for life.', illustrated African child characters set against a colourful school background and a loading progress bar (shown at 85%) to give visual feedback as the app initialises.

Screen1: Provides three access routes via tab selectors: Learner Login, Teacher Login, and Guest Play. Learners authenticate with a simple 4-digit PIN entered via an on-screen numeric keypad which is visually playful and memorable. A 'Recent Learners' panel shows avatar thumbnails (Amina, Kato, Brenda, Isaac) for one-tap quick login. A settings gear icon in the top-right corner allows configuration. Guest Play supports quick access without an account.

Screen2: Learners personalize their in-app identity by choosing a character appearance. Left/right arrows cycle through body styles; icon tabs beneath allow selection of specific features (face, hair, clothing, accessories). The chosen avatar is previewed in real time. A name field (shown as 'Kato') completes the profile. The 'Let's Go!' CTA button confirms the avatar and proceeds to the world map. This step builds ownership and emotional investment in the learning journey.

Screen1: The central navigation hub titled 'My Community'. Six illustrated location nodes are laid out on a map: Home, School Canteen, Market, Taxi Park, Garden, and Playground that are all drawn from day-to-day contexts. Coin and star balances are displayed at the top. A bottom navigation bar provides access to world, quests, rewards, and profile sections. Each map node leads to contextually relevant math activities, grounding numeracy in familiar real-world settings.

Screen2: A level-selection screen for a sample module. Three difficulty tiers are listed: Level 1 – Beginner (star-rated, available), Level 2 – Intermediate (locked, shown with empty stars), and Level 3 – Advanced (partially completed). Each row shows a character thumbnail and a star-rating indicator. Back arrow and help (?) icons appear in the header.

Screen: A drag-and-drop coin simulation set at a snack stall. The learner has UGX 2,000 and must select the correct coins to pay for Juice, Mandazi, and Biscuits displayed on the stall. Coin denominations (100, 200, 500, 1,000, 2,000) sit at the bottom and are dragged to the payment area. A 'Check' button validates the answer with instant feedback. A sound toggle supports auditory learners.

Screen1: A celebratory end-of-level screen displaying 'Well Done!' with three animated stars. The learner's rewards are shown: Coins and XP earned in this session. Three action buttons are presented: Replay to retry for a better score, Next Level to advance, and World Map to return to the hub.

Screen2: Displays the learner's earned achievement badges in a trophy-case style layout under rewards tab. Badges shown include Money Beginner, Smart Shopper, Saver, Quick Counter, and Budget Planner. Each badge is depicted as a colourful icon. Two summary stats appear: total coins earned and current streak when a badge is clicked.

Screen1: A personalised progress overview for the learner. A dropdown time filter is available to switch through daily, weekly and monthly progress. Four topline KPIs are shown as Levels Completed, Coins Earned, Time Spent, and Accuracy.

Below, three skill-specific progress bars display mastery: Counting Money, Adding Money, Making Change. A bottom navigation bar (World, Quests, Rewards, Profile) remains accessible.

Screen2: Class-level analytics view for educators. A class selector and time filter sit in the header. Top metrics: Total Learners, Active Learners, Average Accuracy, and Time Spent. Two ranked lists below: Top performers and Needs support visualised with colour-coded progress bars. A bottom nav bar gives access to Dashboard, Learners, Reports, and Settings.
